Response to Amendment

The following is in response to the amendment filed on July 16, 2003.

Claims 1-7, 9-17, and 19-25 are allowed.

Reasons for Allowance

With respect to Applicant's arguments, the claimed apparatus and method for transferring a fibrous web between two transfer devices are allowed, primarily because the web transfer device of the present invention is configured of a plurality of tubes that direct and discharge air to the upper surface, and additionally comprises at least the features of being substantially planar, being pivotable at one end to move the device between an operative position and an inoperative position, and being able to direct the web without lateral displacement. Prior art transfer devices utilizing a similar configuration of air tubes to direct air to the upper surface of the device do not have planar surfaces, but instead have surfaces of varying curvature or having intermediate creases to put them into an operative position. These devices also require displacement of the web to facilitate the transfer.
